Redis Engine	Embedded In-Memory Redis Mock (Zero setup needed)

Question 4

The screenshot displays the 'ERP System - Admin Panel (Employees Management)'. At the top right, there are buttons for '+ Add New Employee' and 'Logout'. A green message box states: 'Employee chandresh Patel (EMP1001) inserted successfully! Password encrypted with bcrypt. Nodemailer Sent Email: [Click here to view the simulated sent email on Ethereal](#)'. Below this, the section 'Employee Records (Mongoose & Net Salary Calculation)' is shown, followed by the formula: 'Formula: Net Salary = Basic Salary + Allowances - Deductions'. A table lists employee records with columns: Emp ID, Name, Email, Department, Designation, Basic Salary, Allowances, Deductions, Net Salary, Password Status, and Actions. The first row shows 'EMP1001' for 'chandresh Patel' with a net salary of '\$55000'. The 'Actions' column contains 'Edit' and 'Delete' buttons.

Emp ID	Name	Email	Department	Designation	Basic Salary	Allowances	Deductions	Net Salary	Password Status	Actions
EMP1001	chandresh Patel	2023040252@vnsgu.ac.in	Information Technology	MERN	\$50000	\$10000	\$5000	\$55000	Bcrypt Encrypted	<button>Edit</button> <button>Delete</button>

Fill out the employee information below. Password will be encrypted with Bcrypt and emailed via Nodemailer upon saving.

Generated Employee ID:	EMP1002
Auto-Generated Password:	Pass@7107 Will be encrypted using bcrypt before database insertion and emailed to user.
Employee Full Name:	e.g. Rahul Sharma
Employee Email:	e.g. rahul@company.com
Department:	-- Select Department --
Designation:	e.g. Fullstack Developer
Basic Salary (\$):	50000
Allowances (\$):	10000
Deductions (\$):	5000
Calculated Net Salary:	\$55000 (Formula: Basic + Allowances - Deductions)
Save Employee & Send Email Cancel	

Question 6

Question 6: Free API Utilities Demonstration

This application demonstrates consuming free public APIs from **both the Backend (Node.js/Express)** and the **Frontend (Browser JavaScript)**.

1. Utility from BACKEND: Live Currency Converter

How it works: The browser sends a request to the Express server route (`/api/currency-convert`). The Express backend uses `axios` to call the free *Open Exchange Rates API*, calculates the converted amount, and returns the result to the user.

Amount to Convert:	100
From Currency (Base):	USD - US Dollar ▾
To Currency (Target):	INR - Indian Rupee ▾
Convert via Backend API	

Conversion Result (Computed by Express Backend):

Original Amount	100 USD
Exchange Rate	1 USD = 95.997282 INR
Converted Amount	9599.73 INR
Data Provider	Open Exchange Rates (via Backend) (Updated: Thu, 01 Oct 2026 00:02:31 +0000)

2. Utility from FRONTEND: Live City Weather Forecast

How it works: The browser executes client-side JavaScript `fetch()` directly to the free *Open-Meteo Weather API* (no server hop, 100% client-side).

Select City:

New Delhi (India) ▾

Fetch Weather via Frontend API

Current Weather Details (Direct Browser Fetch):

City Selected	New Delhi (India)
Current Temperature	26.3 °C
Wind Speed	6.3 km/h
Time of Observation	2026-10-01T17:30

Bonus Frontend Utility: Random Joke API

Fetch Random Joke via Frontend API

Setup: What do you call a suspicious looking laptop?
Punchline: Asus
